

WHO IS ESA?

The Electrical Safety Authority (ESA) is mandated by the Government of Ontario to enhance public electrical safety in the province. We have responsibilities under the Electricity Act and the Safety and Consumer Statutes Administration Act.

ESA's primary activities are identifying and targeting leading causes of electrical safety risk; monitoring and enforcing regulations; promoting awareness, education and training; and collaborating with stakeholders to improve the state of electrical safety in Ontario.

ESA is responsible for monitoring and enforcing compliance with the Ontario Electrical Safety Code; licensing of Electrical Contractors and Master Electricians; electrical distribution safety; and electrical product safety.

OUR VISION:

An Ontario where people can live, work and play safe from electrical harm.

For more expert tips, as well as information about ESA, electrical inspections and the right questions to ask to ensure your electrical work is done safely and according to the law, visit **esasafe.com**

What you need to know about **ELECTRICAL INSPECTIONS**

esasafe.com

Keeping you and your family safe

ELECTRICAL INSPECTIONS FOR YOUR SAFETY & PEACE OF MIND

Inspections are there for the safety of you and your family to help ensure electrical work complies with the Ontario Electrical Safety Code. At the Electrical Safety Authority, we do half a million inspections of electrical work in Ontario every year.

ELECTRICAL WORK IN YOUR HOME

THREE things you need to know

Hire only a Licensed Electrical Contractor.

It's the law in Ontario that if you, your general contractor or designer are hiring someone to do electrical work in your home, it must be a Licensed Electrical Contractor. Always ask for their electrical contractor's licence number from ECRA/ESA. It should be on their business card, estimate and their vehicle. You can verify or find a Licensed Electrical Contractor in your area on esasafe.com.

Ensure you file a notification of work with ESA

Almost all electrical work requires a notification to ESA. An electrical notification of work creates a permanent record of the electrical work that has been done in your home and it triggers a review process by ESA. This is an added safeguard for you and your family.

Ask for an ESA Certificate of Acceptance.

This is important for resale, insurance and peace of mind. Only ESA can issue a Certificate of Acceptance for electrical work in Ontario. The certificate is issued to the notification holder once the review process is complete.

THE ESA NOTIFICATION & INSPECTION PROCESS*

*The inspection process may vary depending on the project, and ESA's evaluation of safety risk, and may result in an inspection being deemed unnecessary.

1 NOTIFICATION OF WORK

Whoever is doing the electrical work (you or your Licensed Electrical Contractor) must file a notification of work with ESA before or within 48 hours of when the work starts. An electrical notification from ESA is different than a building permit. To file a notification, call 1-877-ESA-SAFE (372-7233).

2 ROUGH-IN

A **rough-in inspection** may take place when all branch circuit wiring and outlet boxes are installed and prior to any wiring being concealed by insulation, vapour barrier, drywall, etc.

The **rough-in inspection** checks that electrical work has been done in compliance with the Ontario Electrical Safety Code. It will either provide a go-ahead or identify defects that need to be fixed, in which case more than one rough-in inspection may be required.

3 FINAL INSPECTION

The notification holder must call ESA for a **final review of the work** as soon as possible once the electrical installation is complete and all defects (if any) have been corrected.

4 CERTIFICATE OF ACCEPTANCE

Once the electrical work has been reviewed, ESA will issue a **Certificate of Acceptance** to the notification holder to confirm that the electrical work is in compliance with the Ontario Electrical Safety Code.

Remember: Inspectors come in an ESA-marked vehicle and with photo ID.
